Water Dedication Compliance

■ Deeded water from Water Right No. _____
■ Assigned _____ shares of stock in _____
■ Purchased a service connection from _____
Water Right Change Application Approval Date: _____
FSSD Water Service Application Approval Date: _____

Agreement Terms

1. Billing and Payments:
I agree to pay all water service bills by the due date. Failure to do so may result in service disconnection. I will be responsible for any attorney fees and collection costs incurred due to non-payment.

2. Residential Use Conditions (if applicable):
For residential connections, the water connection is limited to one residence or dwelling per meter. I grant FSSD permission to access the property with five days' written notice for inspections.

3. Compliance with Regulations:
I will abide by all FSSD rules and regulations, including water dedication requirements, payment of applicable impact fees, connection fees, and any other fees listed in the current Fee Schedule. This includes responsibility for any additional installation or restoration costs described in this Agreement.

4. Meter Access:
If access to the water meter is denied, FSSD reserves the right to terminate water service.

5. Installation and Maintenance Requirements:
I will install and maintain a backflow prevention device as required. The installation of a pressure

regulator and a shut off valve on the customer side of the meter is recommended.

The standard connection and installation fee covers a typical water service installation as determined by the District and includes no road crossings, extended laterals, or abnormal installation conditions. If site conditions require work above and beyond a standard installation — including, but not limited to, road crossings, extended trenching, rock excavation, additional materials, traffic control, or surface restoration — the applicant is responsible for all additional costs incurred by the District. **Road crossings require the applicant to pay for required road base and any associated surface restoration.** All additional costs must be paid in full prior to final meter installation or activation of service unless otherwise approved by the Board of Trustees.

6. Prohibition of Booster Pumps:
Per Utah Code R309-105-9(3), R309-504-5(4), and R309-550-11(3), individual home booster pumps connected directly to the water supply main are prohibited. Violation will result in termination of service.

7. Accuracy of Information:
I certify that all information provided is true and accurate. Any false statements may result in immediate disconnection of service.

Note: A meter fee is required regardless of water usage.
